Urban Communities and Housing

Urban Communities and Housing

Housing can be permanent or temporary.

Housing is about security, or even a sense of security.

Security can be strengthened by the community and supported by governments.

Urban Communities and Housing

If an individual does not feel **safe**, then are they really **secure**? If an individual does not trust that their housing is **permanent**, do they feel **secure**?

Urban Communities and Housing

More than **800 million** people currently live in informal, insecure urban communities worldwide.

Urban Communities and Housing

Land rights are essential to being formally recognized, feeling secure, and having access to many public and private services

When is data useful?

When is data useful?

Without solid and appropriate questions, is data useful?

What answers do we want data to give us?

What answers do we want data to give us?

- Where do people live?
- Why do people live there?
- What is the population density of an area?
- Are there enough houses for the amount of people in a community?

space
people
density
houses
population
area
community

What answers do we want data to give us?

- Where is an appropriate location to build a house, community, or infrastructure?
- Is there adequate critical infrastructure to serve the population?
- How will a community grow in terms of housing and the infrastructure to support it?

A word cloud graphic featuring the words 'community' and 'infrastructure' in large, bold, vertical text. 'community' is in green and 'infrastructure' is in orange. Smaller words are scattered around them, including 'support', 'serve', 'adequate', 'house', 'growth', 'critical', 'build', 'appropriate', 'location', 'population', and 'housing'.

What answers do we want data to give us?

- On average, how far do individuals have to walk, bike, or travel to access water?
- What is an individual's ease of access to healthcare, education, or even basic services?
- Does an individual's house have electricity? Why or why not?

What answers do we want data to give us?

- Will the community be able to support its claims to tenure if challenged?
- Are women's claims to tenure supported by customary, local, provincial, or national law(s)?

A word cloud graphic featuring the words 'tenure' and 'claims' in large, bold, lowercase letters. 'tenure' is in a light teal color, and 'claims' is in a dark grey color. Surrounding these two main words are several smaller words in various colors (teal, orange, green) and orientations. The words include: 'national', 'local', 'supported', 'will', 'challenged', 'community', 'provincial', 'customary', 'able', and 'women's support'.

Understanding the questions we want to answer

Understanding the questions we want to answer

- Ultimately, if we do not know which questions to ask, then do we really understand the context?
- If we do not know which questions are most appropriate, can we truly assist communities in which we work?

Technology and Community Engagement and Empowerment

Data Collection and Analysis

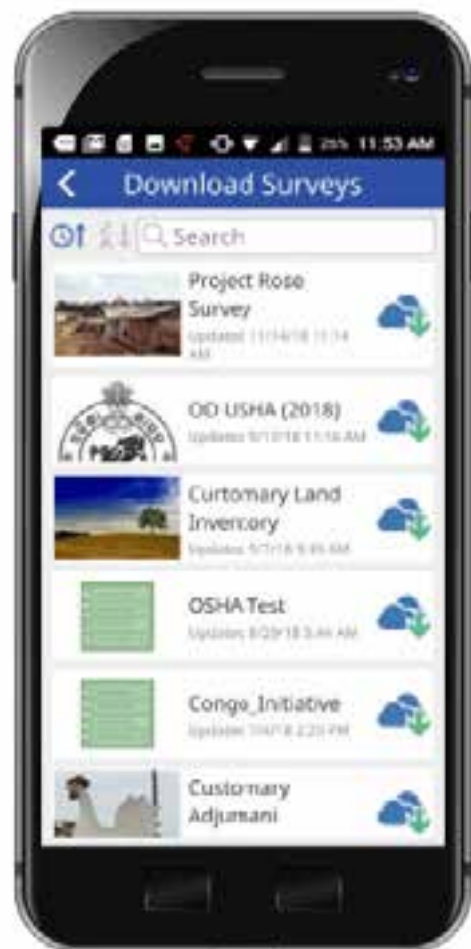

Data Collection and Analysis

Data Collection and Analysis

Surveys can be used to ask questions to create datasets

Data Collection and Analysis

Data Collection and Analysis

Maps and tables can be used to ask questions of collected datasets

Data Collection and Analysis

Drone imagery can be used to validate on-the-ground realities of collected datasets.

Data Collection and Analysis

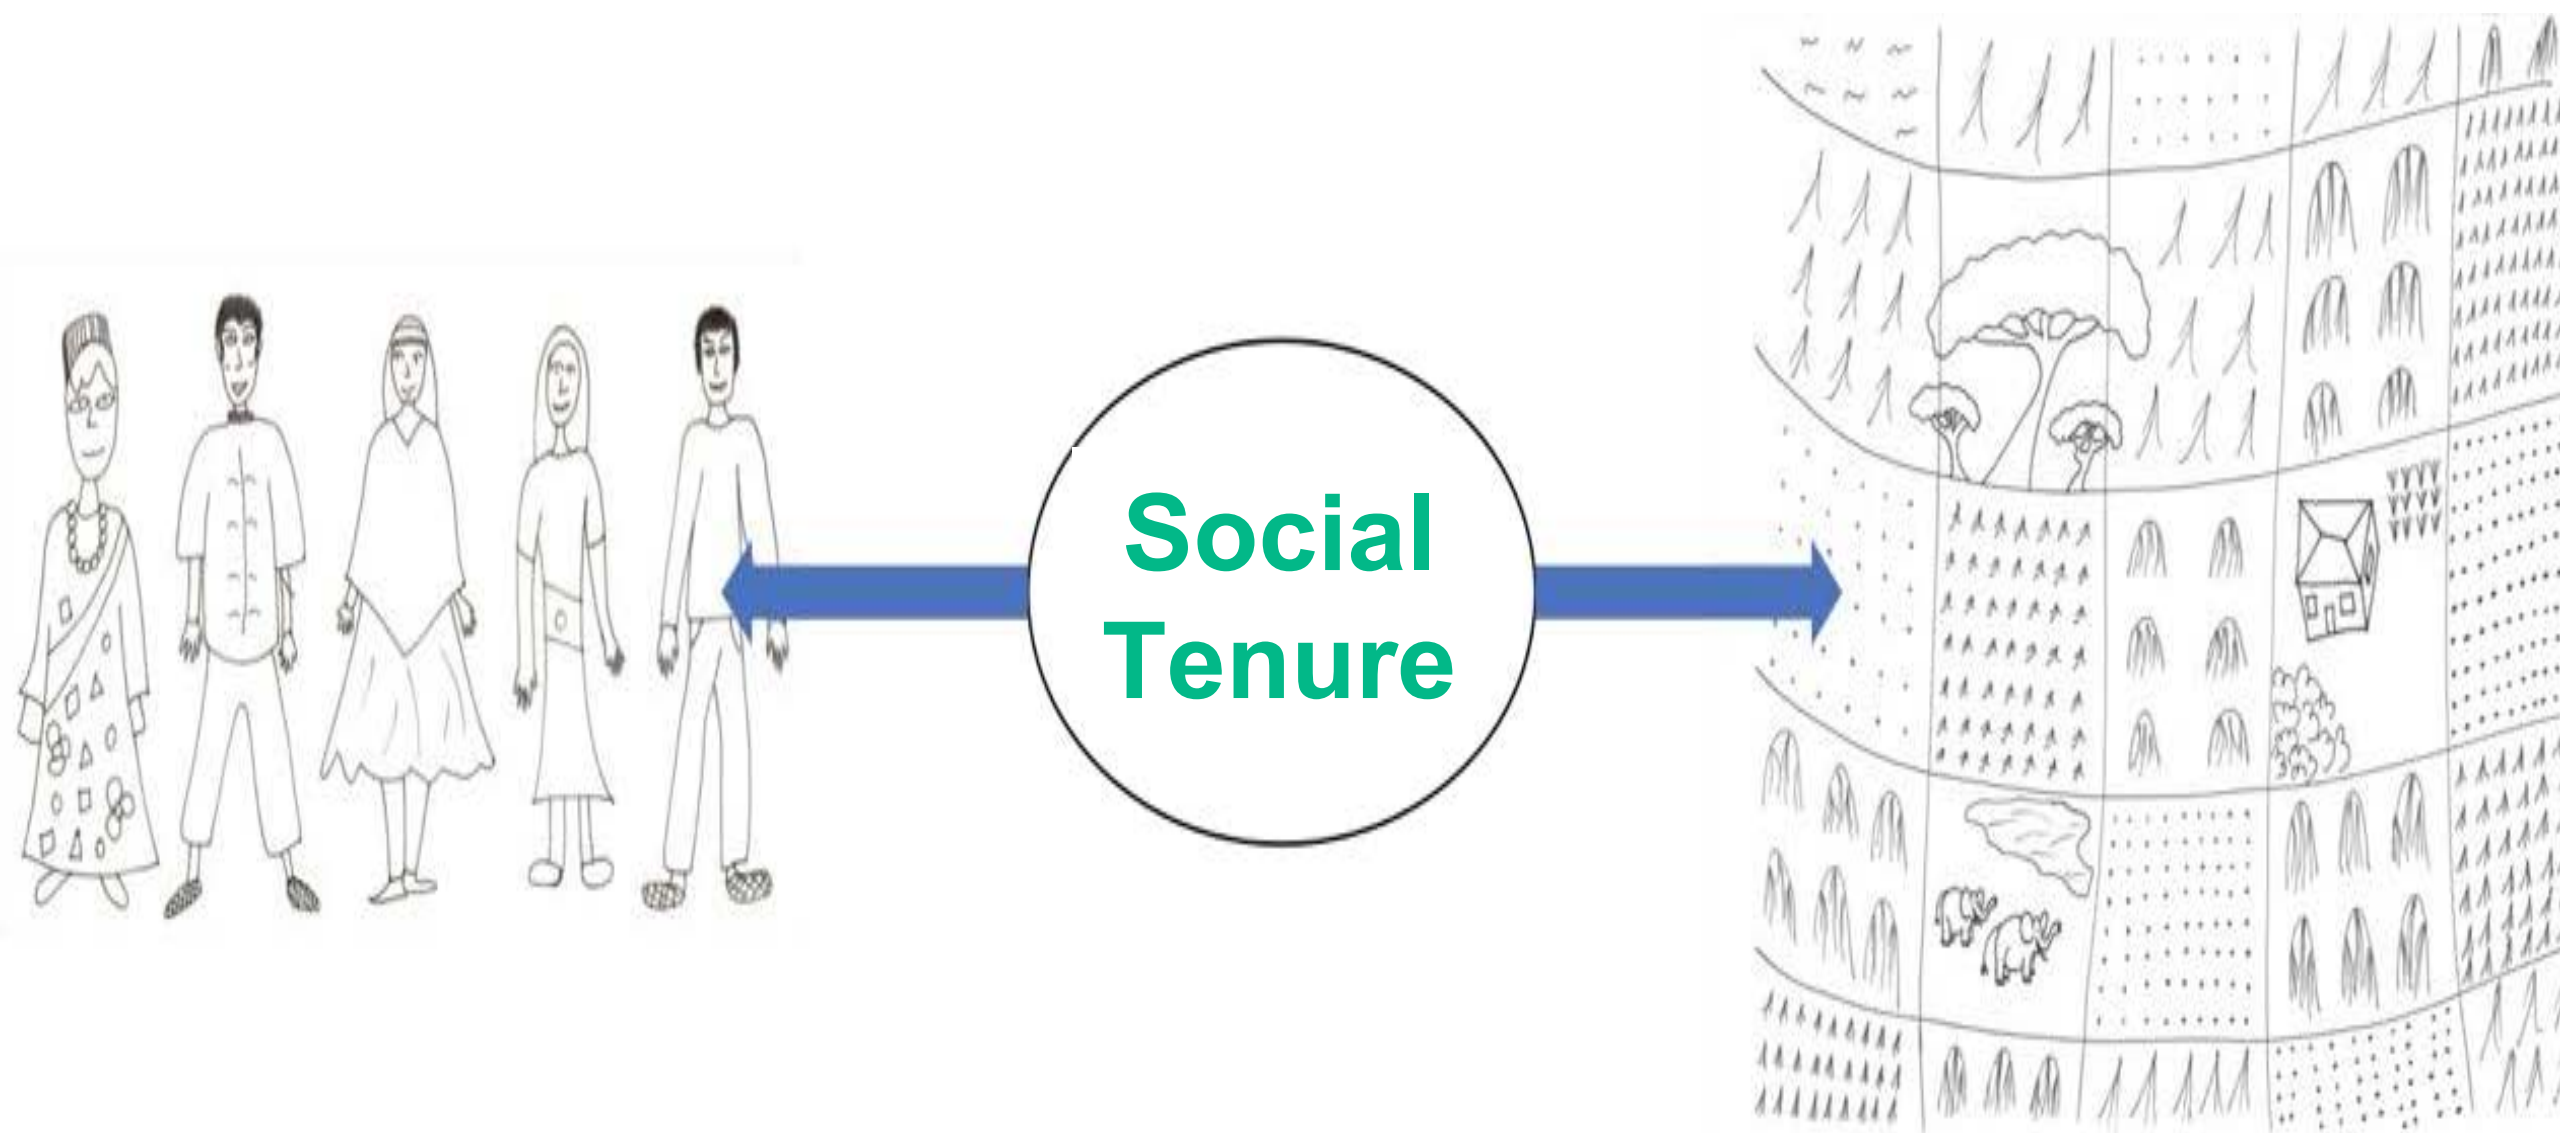

GNSS, or GPS, devices can increase accuracy of data collection of houses and land.

Data Collection and Analysis

Computers and software solutions can aid in data analysis.

Challenges and Results

Informal or Parallel Registry

The Challenge:

Documentation of Customary Rights by Legitimate Authority

The Tools

The Result

Community map with documented customary rights at +/- 5 Meter Accuracy

Advocacy and Planning

The Challenge:

Advocating for Ethnic & Indigenous Land Rights

The Tools

The Result

Identification of Community Boundaries, Ongoing Monitoring & Advocacy for Community Rights

Intermediate Steps Towards Formalization

The Challenge:

How to formalize rights for slum dwellers in Odisha State, India.

The Tools:

The Result

Field team, using a combination of drone imagery and Cadasta applications successfully documented over 125,000 households

Intermediate Steps Towards Formalization

The Challenge:

Rural Smallholders and Value Chains

The Tools:

The Result

Field team, using a combination of drone imagery and Cadasta applications successfully documented over 125,000 households

Cadasta Use Case:

Tata Trusts | Odisha, India

In the **Indian state of Odisha**, government officials made international history and headlines with the [Odisha Liveable Habitat Mission](#) which utilizes Cadasta's tools to identify, map, and issue formal land certificates to residents of urban informal settlements. Using drone imagery, community data collectors, and Cadasta's technology, this ambitious program demonstrated the potential of bottom-up data collection and resulted in the issuance of 60,000 official certificates of occupancy. By 2020, an estimated 1 million people will have been documented by the program, enabling these residents to invest in their properties and businesses without fear of eviction.

Cyclone Fani, categorized as an Extremely Severe Cyclonic Storm made landfall earlier this year, affecting over 15 million people in Odisha State alone and contributed to at least 8 million USD in damage.

Cadasta Use Case:

Pradan | Odisha, Cadasta

In the **Indian state of Odisha**, Cadasta is partnering with the Indian nonprofit, [Pradan](#), to map, document, and advocate for community forest rights. Pradan works with local communities in Odisha state that are eligible to apply for government recognition of rights to forest reserves through the Recognition of Forest Rights Act of 2006 and the Community Forest Resource Rights (CFRR). To do so, Pradan is using Cadasta to map and demarcate agreed-upon forest boundaries to develop a system of protection for the community forest areas. This approach was piloted in one community area with documented individual farms and properties. Pradan now hopes to expand the project throughout the state.

Land and Housing Actions Sparked by Spatial Planning: A Case of Spatial Planning in a Secondary City

Presented by:

Bernadette Bolo-Duthy

National Director, HFH Cambodia

timoelliott.com

“I think you’ll find that mine is bigger...”

Battambang

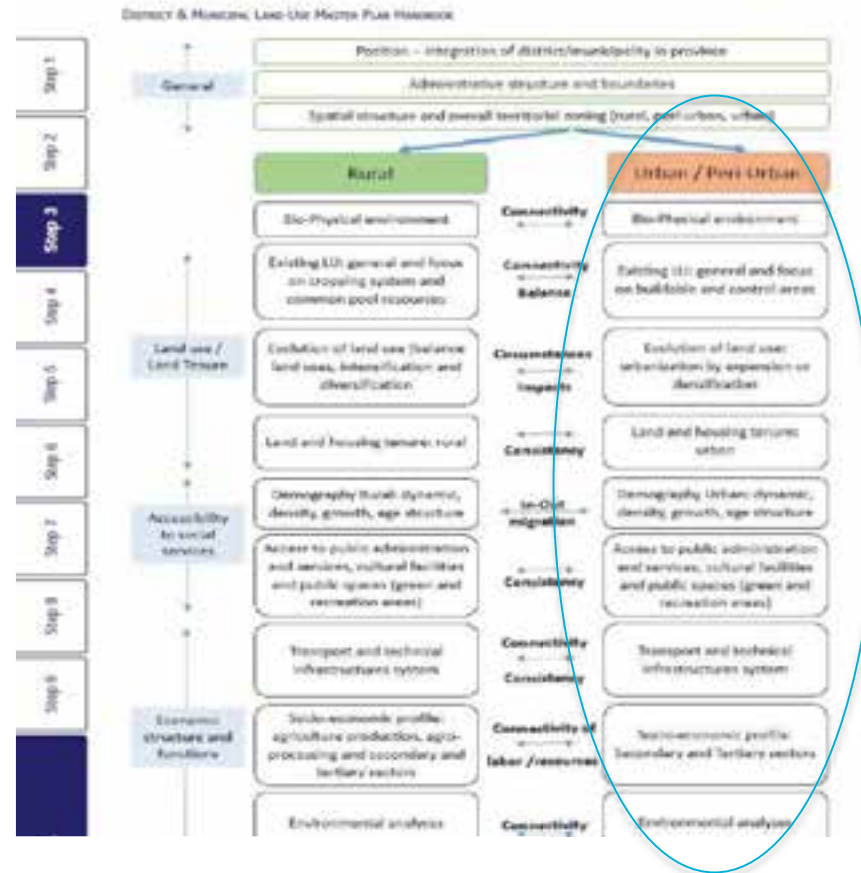

- **Secondary city**
- **Rice bowl**
- **150,000 Urban Population**
- **1M Total Population**

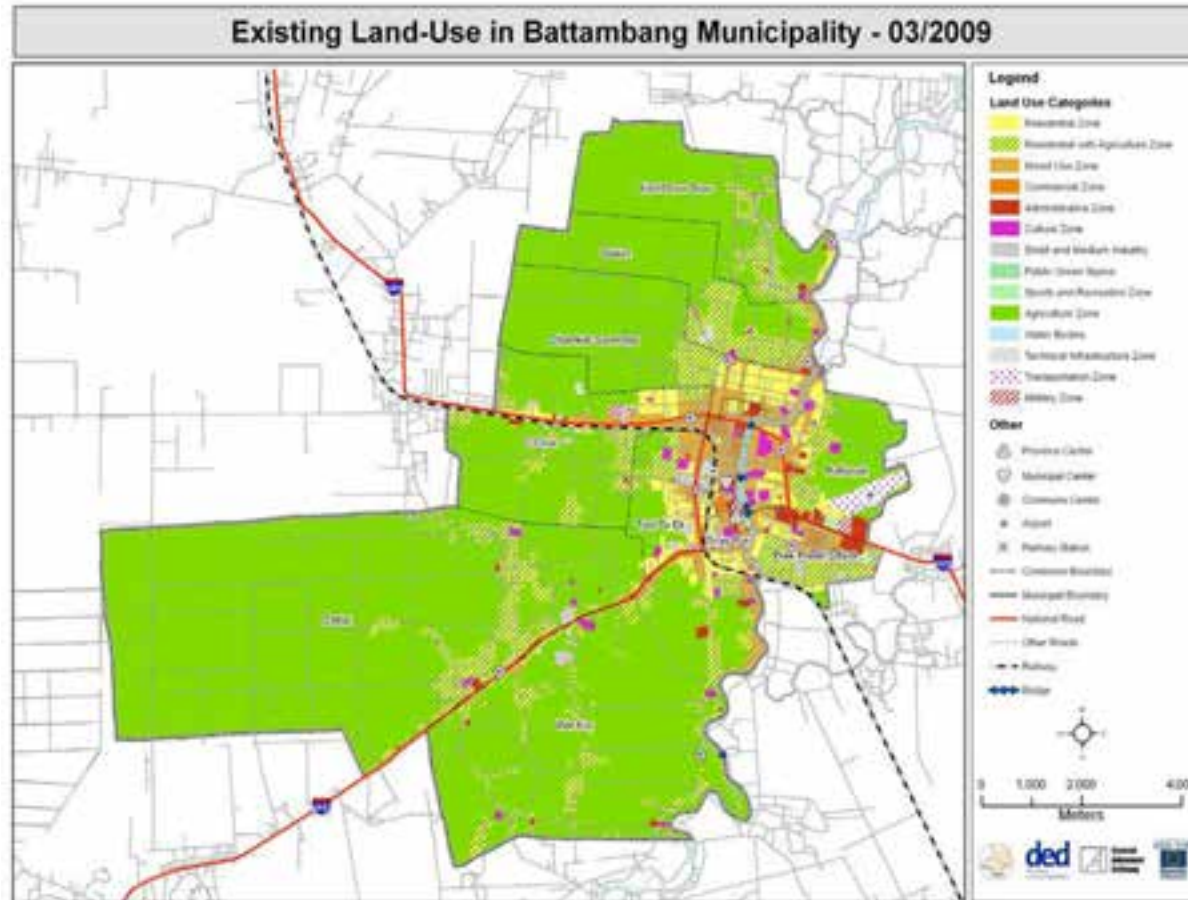

DED/GIZ/BTB Master Planning Timeline – Over a Decade

- 2003 – Master Plan Project started (RGC decentralization)
- 2009 – First Municipal Land Use Plan finalised
- 2011 - National Spatial Planning Policy adopted
- 2012 – Provincial Spatial Plan developed
- 2015 - Municipal Land Use Plan Approved

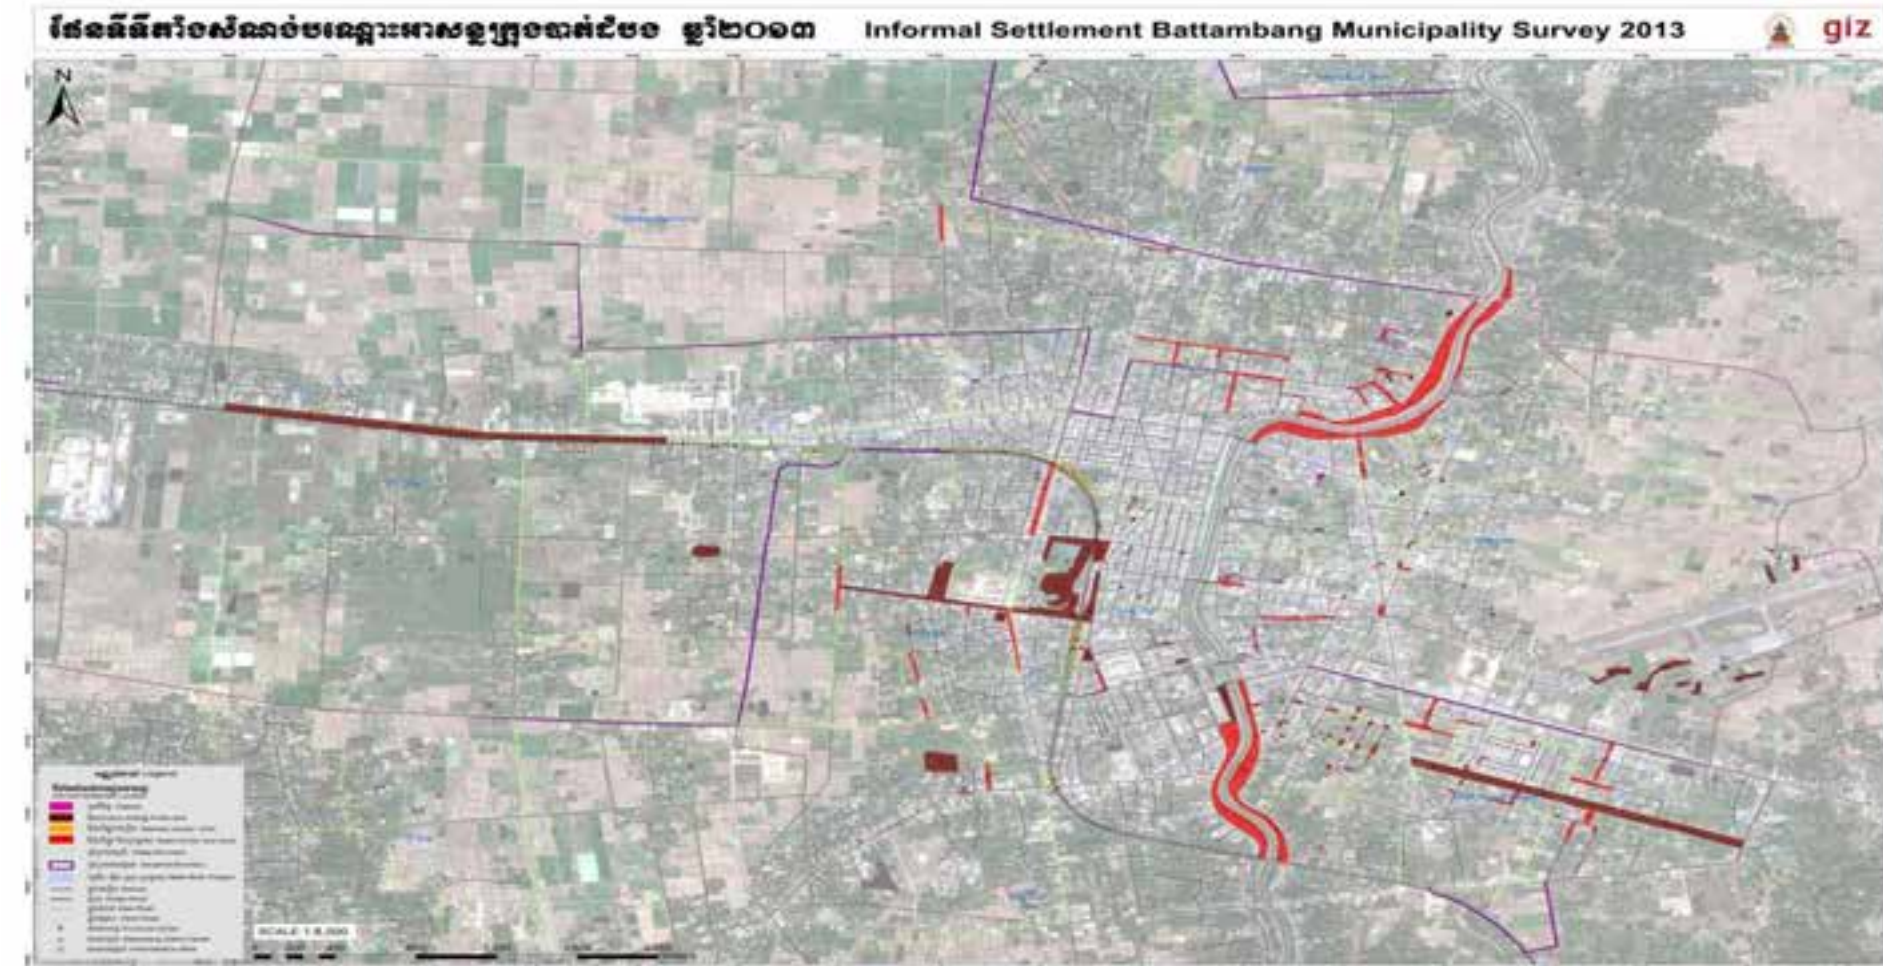

Collected and generated heaps of data

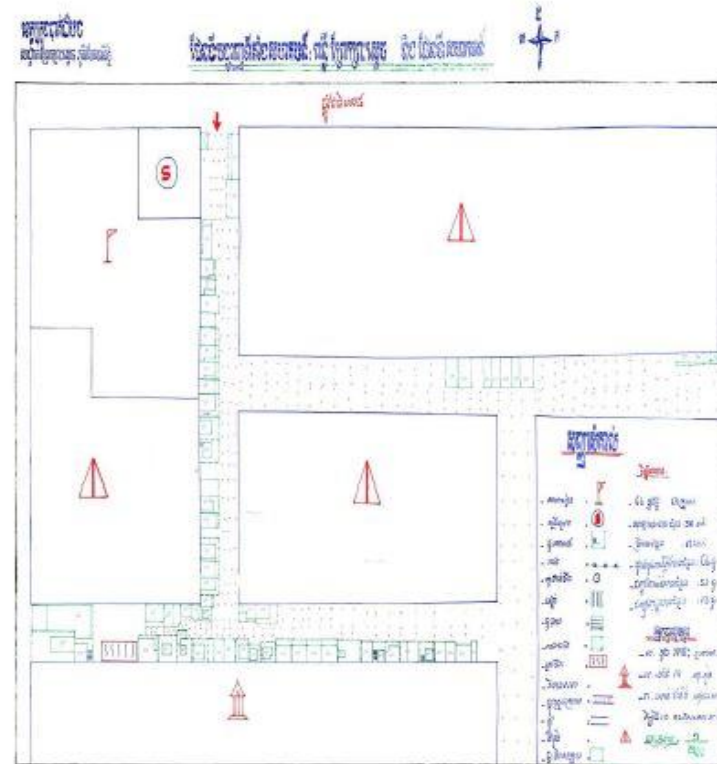

Snapshot of existing uses

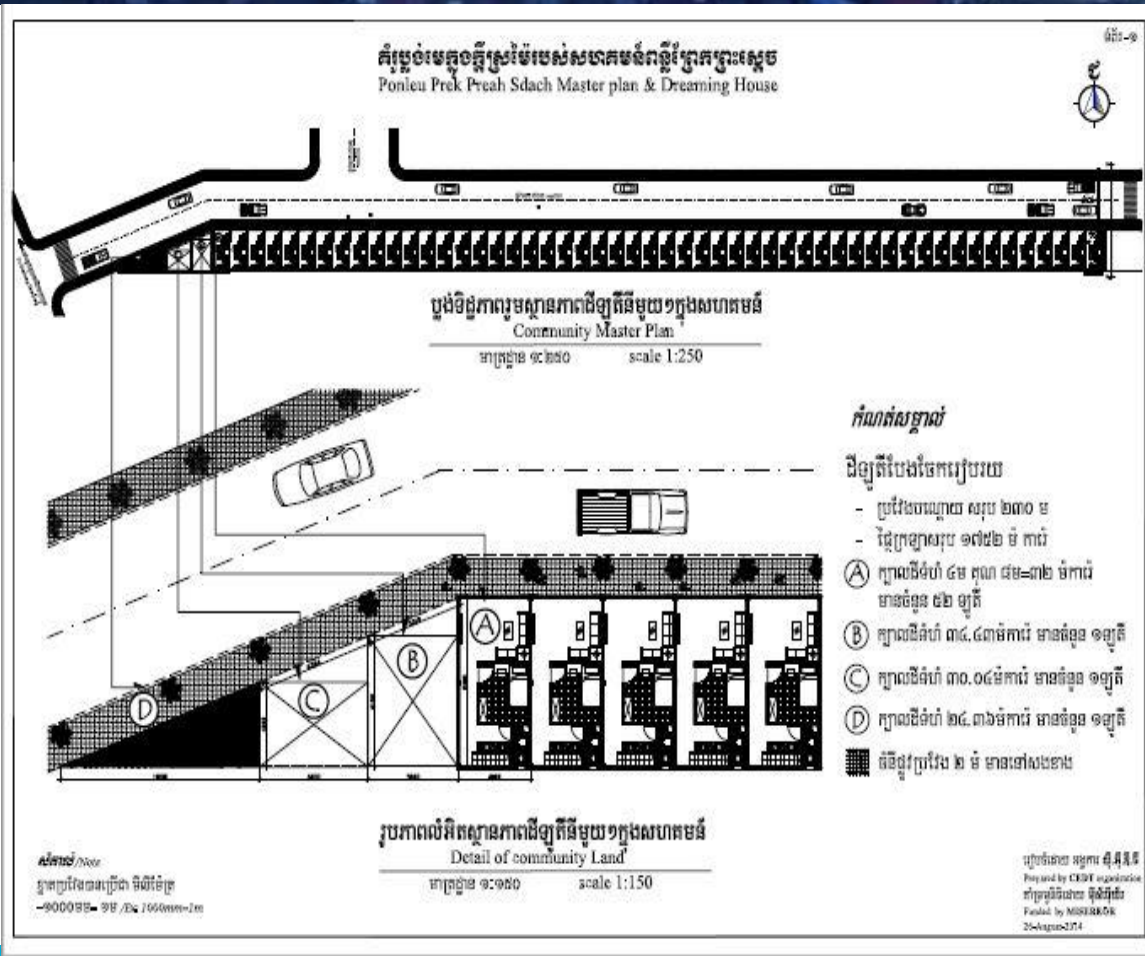

Snapshot of the scale and nature of informality

Access to maps led to more maps

... led to more collaborations & dreams

Land and Housing Initiatives

- Organizing and Planning
 - formed savings groups and self-help groups in informal settlements
 - conducted community surveys and mappings
 - established networks and learning from others
- Implementation
 - Minor upgrading to demonstrate community capacity; and intent to be a development partner
 - Preparation of alternative plans
 - Familiarized with land laws

Land and Housing Initiatives

- Negotiations with Government for land
 - Land sharing (made road smaller)
 - Voluntary resettlement
 - On-site upgrading

Land and Housing Outcomes

- Opened the way for meaningful involvement in informal settlements
- ‘Experiencing data’ and documentation led objectivity
- Improved cooperation between the municipal administration, civil society and settlement representatives.
- Legal and practical solutions have already been found for four settlements.
- Enabling them to remain on what was previously state land. Progress has been made in regard to informal settlements.

Land and Housing Outcomes

- The municipality has not forced evictions and/or relocations of informal settlers.
- Funding for community organizing of informal settlements, participatory approaches, testing of land laws, capacity building of government and civil society actors
- Implement the national government's Circular 03 on the regulation of informal settlements, supported by a number of NGOs

Land and Housing Outcomes

- The municipality has not forced evictions and/or relocations of informal settlers.
- Investments from donors and multilaterals increased - for community organizing of informal settlements, participatory approaches, testing of land laws, capacity building of government and civil society actors
- Implement the national government's Circular 03 on the regulation of informal settlements, supported by a number of NGOs

City-wide Mapping Methodology

1. ONA
2. GIS & GPS
3. Desk review
4. Focus group discussions
5. IS survey

Who are involved?

| Institution | Role |
|--|--|
| Community Leaders | Data collection |
| Battambang Municipality | (Approval and encourage local level to support) |
| Sangkat and Phum Council | (Make appointment with the community) |
| Community Development Foundation | Develop questionnaires and lead the process |
| Housing Office of Battambang Province | Technical support and community authorities and community) |

Importance of the mapping

- Availability of data to be used by various stakeholders to impact the city positively
- Inform government about the latest data and easy for them to manage the community
- Community know how they should manage their people based on the information gathered
- The information will be accurate

Use of the information

- It is used to plan for the land use and other development priority.
- This information is used to share internally and externally for the benefit of the people.

What have been done on the information?

Key findings

| Description | Number |
|------------------|------------------|
| 60 IS | Own their houses |
| Total houses | 3303 |
| Total households | 3817 |
| Total population | 16,072 |

| Description | Number |
|------------------|-------------|
| 1 IS | rent houses |
| Total houses | 42 |
| Total households | 42 |
| Total population | 126 |

Key findings – Location – High risks

Informal Settlements 2019

- Along river bank
- Along railway track
- Along road side
- Other land, private

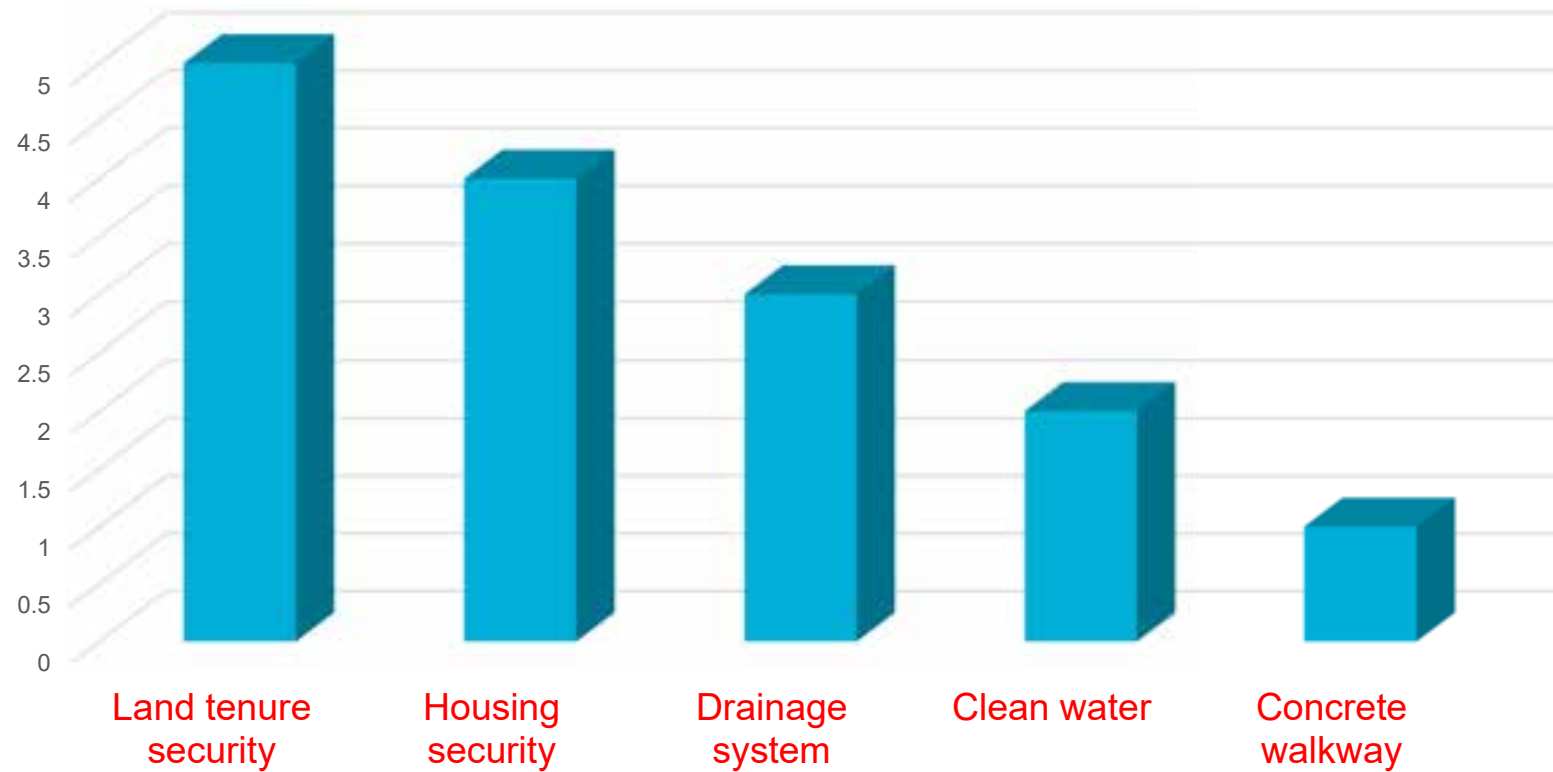

Key findings

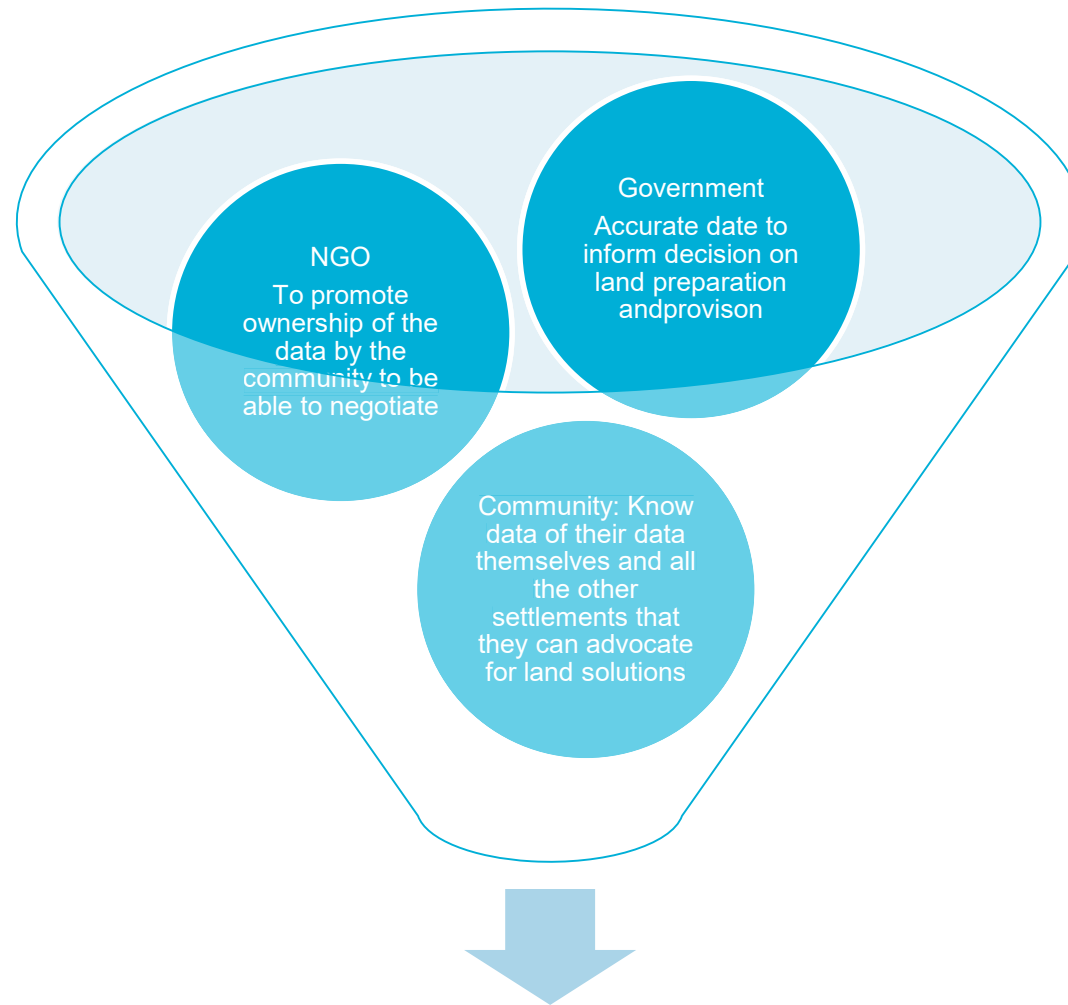

Informal Settlement Growth by Decade

Key findings

Prioritized Needs

Secure Tenure

Best practices

- Good collaboration from local authorities
- The communities are actively involved in the process of data collection
- The data collectors could meet all the 61 informal settlement
- Community leaders have opportunities to partner with us
- Good team spirit amongst team

Challenges

| Challenges | Solution |
|---|---|
| Still there are some community people that are not interested in the survey. | We try to encourage those who met us to participate fully. |
| Technology was challenging; easy to collect GPS information but hard to upload due to poor internet connection | The team try to update and follow up not to miscommunication again. |
| There is a limitation on the human resources during the | We try to help them more as we have some experience more than them. |

Lessons Learnt

- The relationship between community and authority is strengthened.
- It is a good opportunity to promote learning environment through this process.
- This is to provoke action from local authorities to support more.
- This data is useful for stakeholders to see what they can integrate.
- Increase accountability and accuracy of data

Recommendations

- Authorities must open more to support the community
- Partners should also provide more technical support
- All the processes must comply with the local government laws
- Should learn more about the community income so that we know they can afford a house or not

Thank You,

Habitat
for Humanity[®]
Cambodia

WHY BIG DATA FOR HOUSING?

DECODING CITIES WITH BIG DATA
& ARTIFICIAL INTELLIGENCE

WHO WE ARE

URBANMETRY (formerly known as Property Pricetag) is a property data company that harvests, cleans and analyses large amounts of city data, through its proprietary algorithms to extract trends and patterns in the built environment. It offers this data to the general public, as well as public and private sectors, in hopes of creating a more efficient and transparent property market, improving city planning, and shaping a sustainable urban environment.

We offer the aggregated data to various key stakeholders in the property market including developers, bankers and government bodies to enable better and more relevant analysis during business development and policy making processes.

SUPPLY & DEMAND

THE HOLY GRAIL OF PROPERTY MARKET

Source: Urbanmetry Database

HOW OUR CLIENTS USE OUR DATA?

| PROPERTY DEVELOPERS | LAND ACQUISITION | PRODUCT PLANNING | MARKETING |
|--------------------------------|---|---|---|
| <p>CURRENT CLIENTS</p> | <p>Property developers procure data from Urbanmetry before land acquisition to stress test the assumptions on the GDV and Sales potential of property in locations of interest.</p> | <p>Property developers with existing landbank uses Urbanmetry data to determine the type and timing of product launch. The data is also used to guide design decisions with architects and planners.</p> | <p>Property developers also uses Urbanmetry data to determine the best marketing approach to reach the target market for the product.</p> |
| GOVERNMENT | POLICY | MONITORING OF PROPERTY MARKET | AFFORDABLE HOUSING PLANNING & STRATEGY |
| <p>CURRENT CLIENTS</p> | <p>Government are able to investigate the effectiveness of various Housing and Property Policies with the data. This will also help with modelling impact of new policies.</p> | <p>Government Departments often work in silos and data is usually fragmented across Ministries and Departments. Our consolidated data helps all levels of government gain a comprehensive view of the market.</p> | <p>Different states and federal government agencies have a variety of Affordable housing strategies. Urbanmetry's data allows government to make data driven strategy and planning decisions to best utilise available resources.</p> |
| BANKS | RISK MANAGEMENT FOR PROPERTY DEVELOPMENTS | MONITORING OF PROPERTY STOCKS & MARKET | MORTGAGE VALUATION |
| <p>TARGETED CLIENTS</p> | <p>Banks require market research to support term and bridging loans for property developments. Urbanmetry's report is able to quantify the possible risks of property developments funded by the banks.</p> | <p>Funds and investment banks need better data to model the health of property stocks and the overall property market. Urbanmetry's data is able to identify the health of listed property developers.</p> | <p>Urbanmetry's data is able to generate near term forecast valuation of individual properties. This would expedite the mortgage application process for Clients.</p> |

SATELLITE RECOGNITION TECHNOLOGY

WE TRAIN OUR AI BOTS TO COUNT HOMES IN THE LOCAL CONTEXT

SATELLITE RECOGNITION TECHNOLOGY

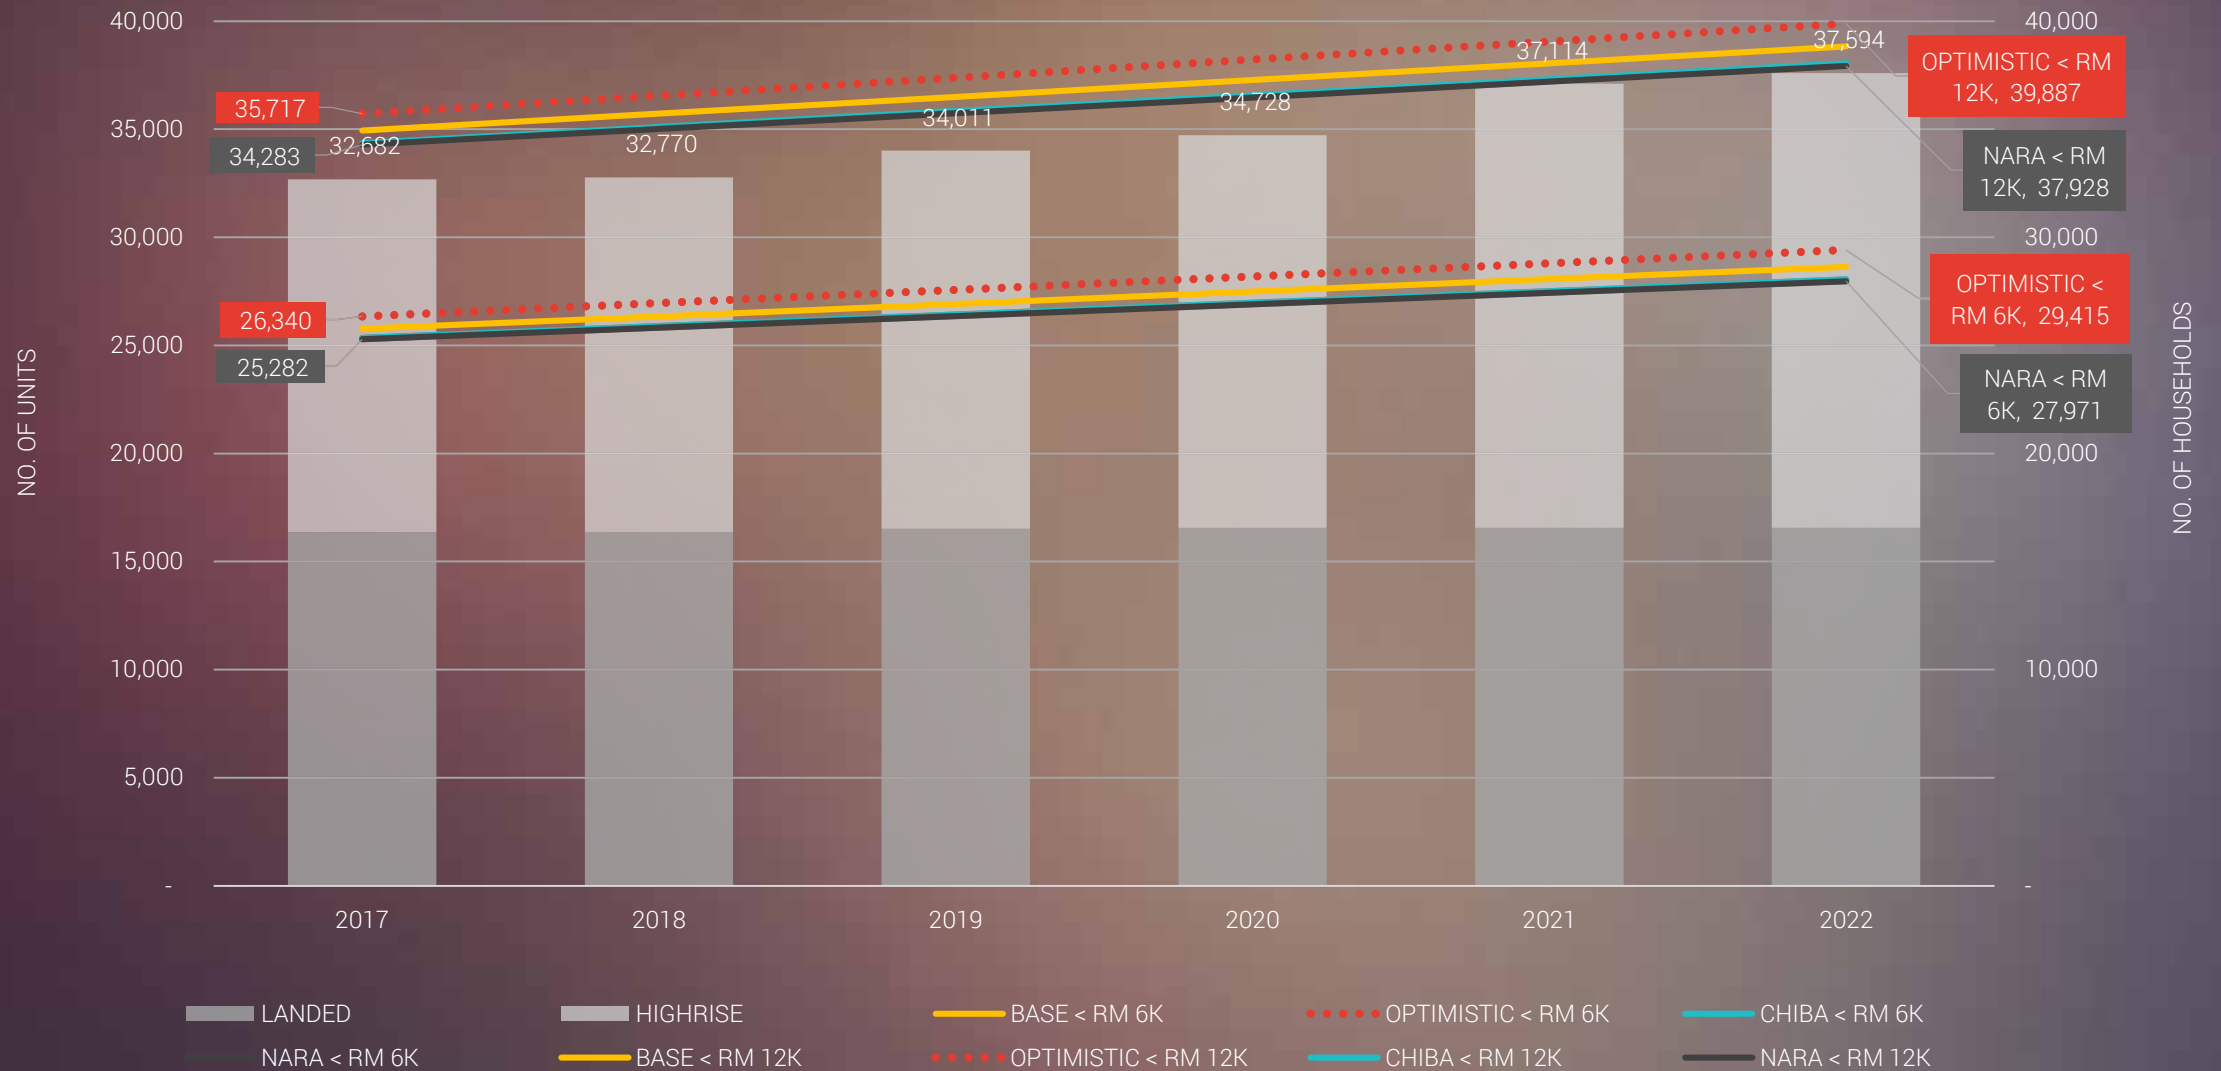

THE AI ALGORITHM IS TRAINED TO IDENTIFY LOCAL RESIDENTIAL & NON-RESIDENTIAL BUILDINGS IN DIFFERENT IMAGE CONDITIONS

PROPERTY SIZE STOCK TAKE

HOUSEHOLD INCOME UNDER 6K & RESIDENTIAL STOCK UNDER RM 500K (SAMPLE)

TRACKING TRANSACTIONS CAN REVEAL PRICE SENSITIVITY & MICRO-DEMAND

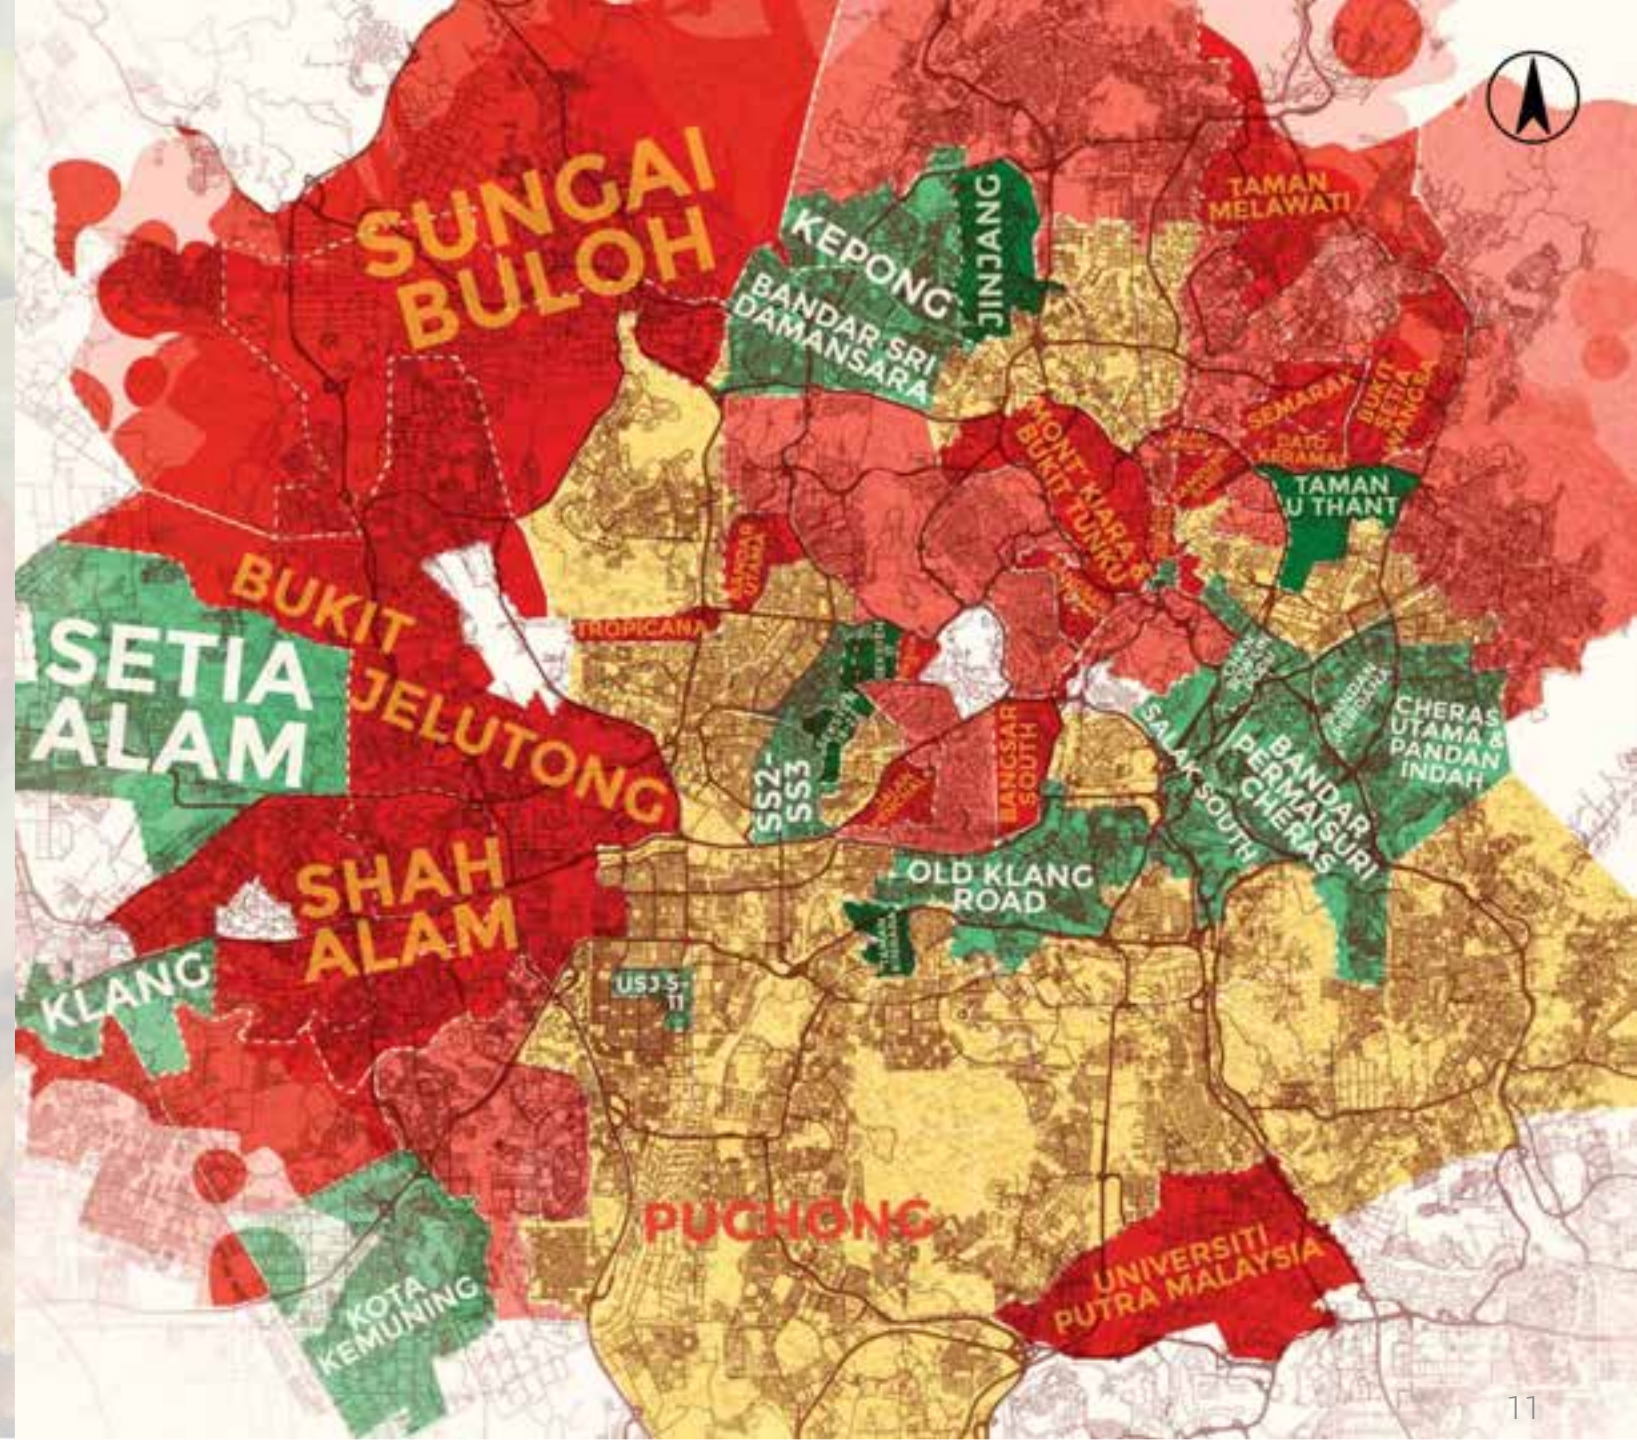

NASI LEMAK INDEX

How does the city feed its people?

We track the density of halal and non-halal establishments serving food priced under RM15 to see where different communities live.

NASI LEMAK INDEX

CAFÉ INDEX

Mushrooming cafés in your neighbourhood?

This could be a good sign for potential upside of your property price.

TRAVEL TIME TO PENANG BRIDGE (0800)

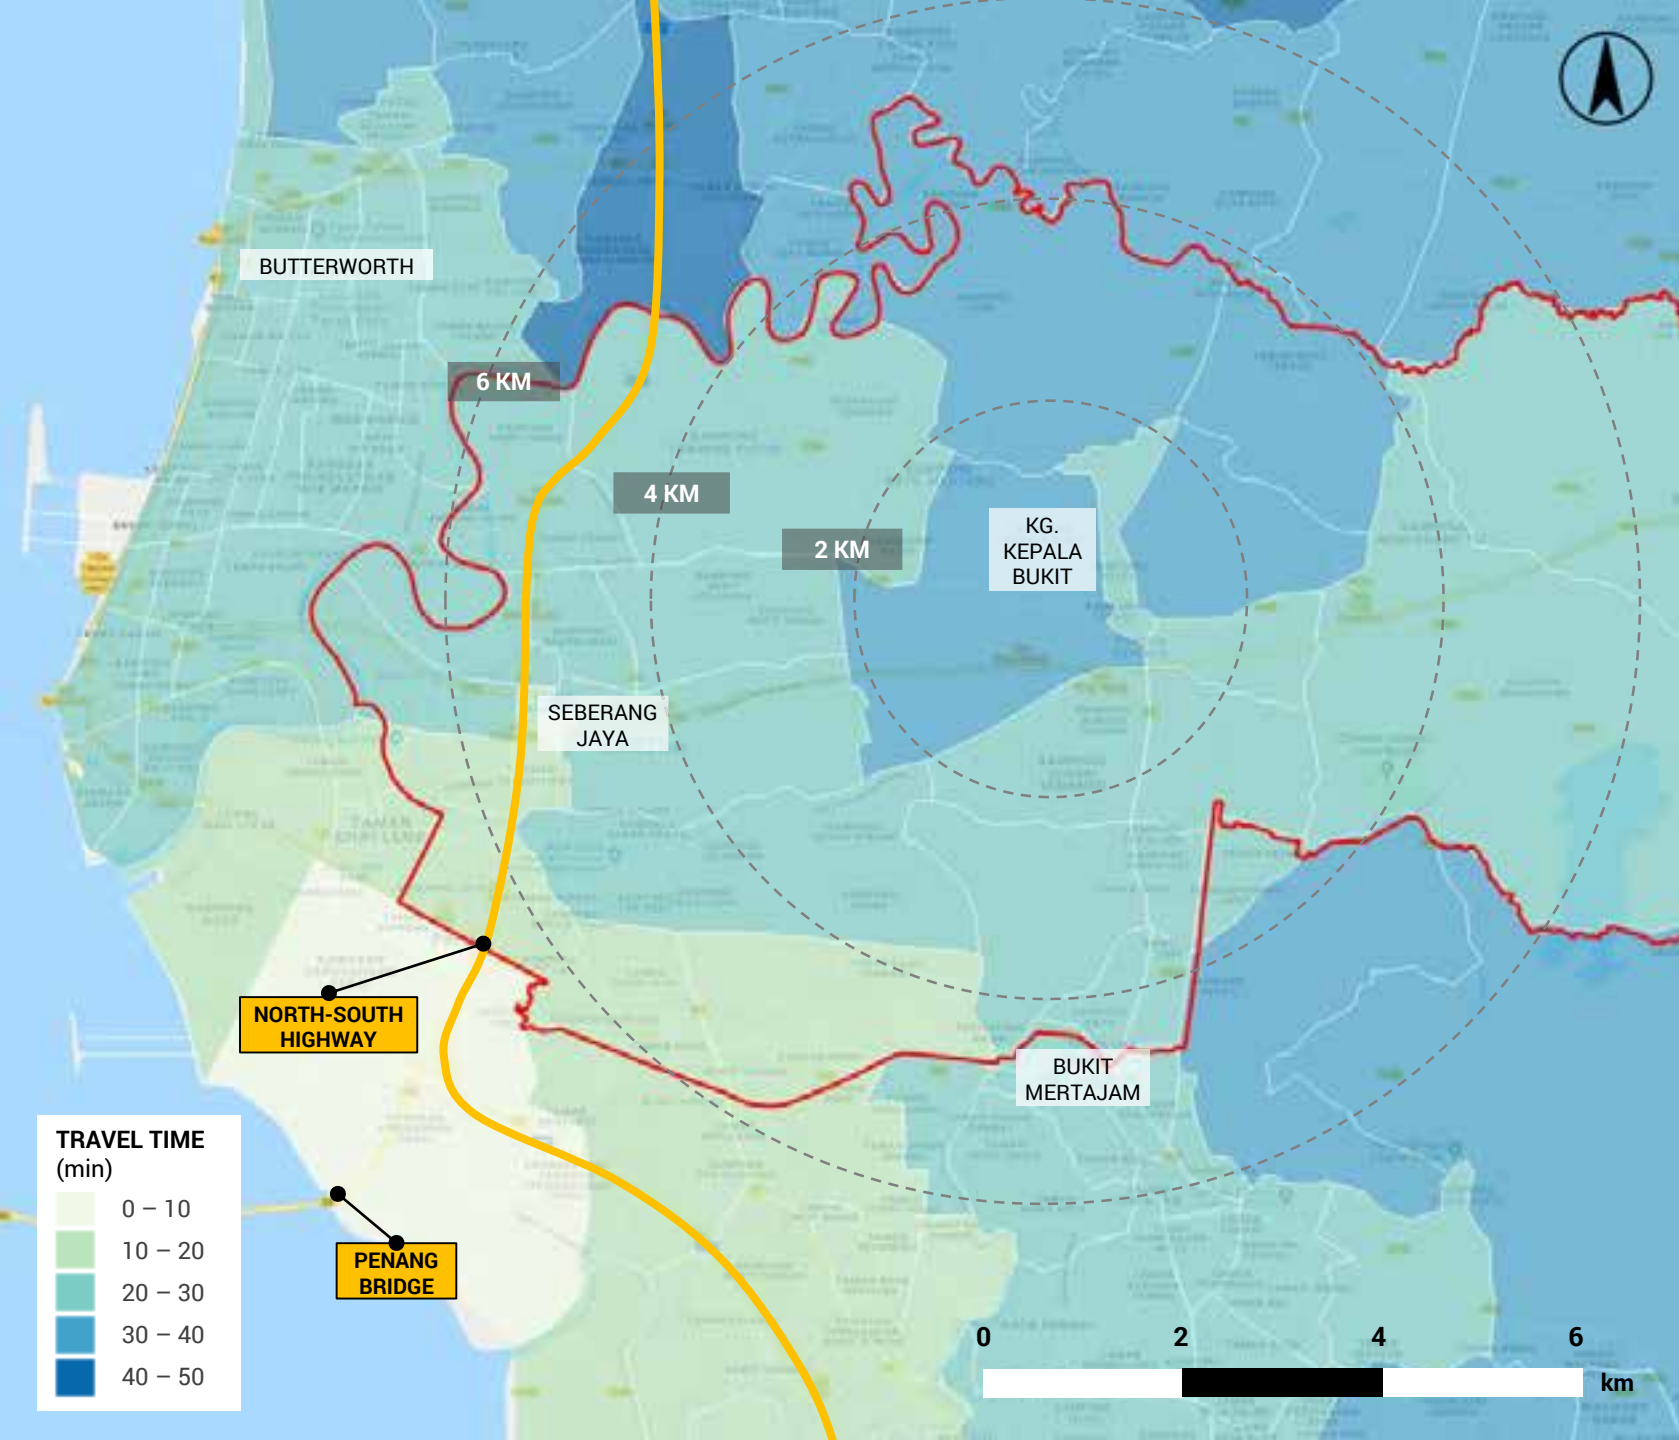

Residents in the study area could have difficulty reaching the Penang Bridge during the early morning traffic.

Most residents are only able to reach the bridge within 30 minutes in the morning with the exception of those living in the South-Western neighbourhoods.

In addition, residents in Kg. Kepala Bukit could take up to 40 minutes to reach the bridge by car.
